

$$dp_0 = (l_1 + l_2) / 2$$

(a) Set point spacings

(b) Perform boundary triangulation

$$dp_Q = (dp_1 + dp_2 + dp_3) / 3$$

$$d_m \leq \alpha dp_Q \quad m=1,2,3.$$

then reject Q

(c) Insert new node make α check

$$s_j < \beta dp_Q$$

for any $j=1..N$

then reject Q

(d) Make β check
